

Release Notes

NDI Audio Gateway

v1.2.1

- Updates NDI Library to 5.5.2.
- Adds logging support and Windows console start for better debugging on the field.
- Windows installer uninstalls old versions and move everything to the Avsono folder.

v1.1.0

- Adds license version checking for major versions. Breaks compatibility with older versions.
- Minor changes to support link on interface.

v1.0.3

- Fixed mouse over tool tip to only show lines of text that don't fit on screen or drop down.
- Fixed default sample rate to 48000.
- Added release_win_must_haves.zip to source folder to resolver dependencies. This will be fixed when upgrading to Qt6.

v1.0.2

- Fixed license bug where the activation was not working if you activated after being active first time.
- Fixed license bug where the product type was not present at the top right corner.
- Fixed Linux installer .deb to contain icon and built script.

v1.0.1

- Fix font size on macOS to match Windows and Linux size.

- License is validated once using the internet, then it can be used for 15 days without internet connection.
- Tool tip implemented to show long NDI names.
- Standalone Linux Ubuntu version added.
- Fixed buffer input and output bug.
- Sample rates boxes show all possible sample rates available on the devices.

v1.0.0

- Initial release for macOS and Windows.
